Creación de aplicaciones en Django (Hola Mundo)

The image shows a terminal window and a file explorer. The terminal window displays the command `python manage.py startapp hola_mundo` being executed in a directory named `misitio`. The file explorer shows the contents of the `hola_mundo` directory, which includes files like `migrations`, `admin.py`, `apps.py`, `_init_.py`, `models.py`, `tests.py`, and `views.py`.

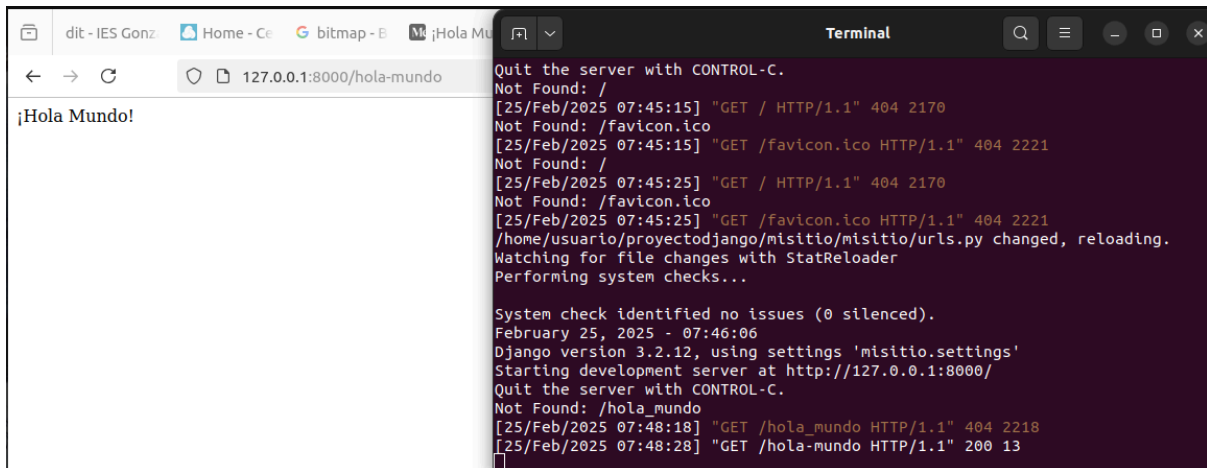

The image shows a code editor window displaying the `urls.py` file. The code defines the URL patterns for the application, including the `urlpatterns` list. The code is as follows:

```
1 """misitio URL Configuration
2
3 The 'urlpatterns' list routes URLs to views. For more information please see:
4     https://docs.djangoproject.com/en/3.2/topics/http/urls/
5 Examples:
6 Function views
7     1. Add an import: from my_app import views
8     2. Add a URL to urlpatterns: path('', views.home, name='home')
9 Class-based views
10    1. Add an import: from other_app.views import Home
11    2. Add a URL to urlpatterns: path('', Home.as_view(), name='home')
12 Including another URLconf
13    1. Import the include() function: from django.urls import include, path
14    2. Add a URL to urlpatterns: path('blog/', include('blog.urls'))
15 """
16 from django.contrib import admin
17 from django.urls import path#Apps
18 from hola_mundo import views
19
20 urlpatterns = [
21     path('admin/', admin.site.urls),
22     path('hola-mundo', views.hola_mundo)
23 ]
```

The image shows a code editor window displaying the `views.py` file. The code defines the `hola_mundo` view function, which returns a `HttpResponse` object with the text `¡Hola Mundo!`. The code is as follows:

```
1 from django.shortcuts import render
2
3 from django.http import HttpResponse
4
5 def hola_mundo(request):
6     return HttpResponse('¡Hola Mundo!')
```

Creación de aplicaciones en Django (Botones)

```
^Cusuario@usuario-E70-SFF:~/proyectodjango/misitio$ python3 manage.py runserver
